

2014Certified Peanut Buyers Guide

IMPORTANT NOTICE!

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

Georgia Crop Improvement Association, Inc.

Phone: (706) 542-2351 Fax: (706) 542-9397 www.georgiacrop.com

Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

- 1. Adapted varieties of known performance.
- 2. Never more than two generations from Foundation seed.
- 3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
- 4. Conditioned in an Approved Plant.
- 5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement.

Please visit <u>www.swvt.uga.edu</u> for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

- O. Variety not Protected by PVPA No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
- 1. U. S. Protected Variety thru Certification (PVPA 1970 title V) to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
- 2. U. S. Protected Variety (PVPA 1970 and no title V) A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
- 3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
- 4. U.S. Protected Variety (PVPA 94 and no title V) A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
- 5. U. S. Protected Variety (PVPA 94 and title V) to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
- 6. U.S. Plant Variety Protection Applied for PVPA 94 may be through title V or not. Same rules apply.
- 7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to <u>clean, bag or STORE</u> farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is <u>patented or contains a patented gene</u> (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

VARIETY DESCRIPTIONS

<u>Peanuts – 107</u>

"107" (FloRun TM) is a medium maturing (133-140 days), high oleic runner market-type peanut variety with normal runner seed size similar to Florunner and Georgia Green. It has excellent resistance to TSWV. An application for protection under the U.S. Plant Variety Protection Act has been filed and the variety is protected by the high oleic patent. The variety was developed and released by the University of Florida may be propagated by licensed producers only. 5/ U.S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts – 511

'511' (TUFRunner TM) is a large-seeded, high oleic runner peanut variety with very good tolerance to white mold, moderate tolerance to tomato spotted wilt virus (TSWV) and is susceptible to leaf spot. Late planting (after May 31) should be avoided to minimize leaf spot risk. Using fungicides with both systemic and protective activity against leaf spot will provide the best results with TUFRunner TM '511'. **This is a patented variety and may only be propagated by licensed producers.** 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

<u>Peanuts – 727</u>

727 (TUFRunnerTM) is a medium maturity, large seeded, High Oleic peanut variety with good resistance to tomato spotted wilt virus (TSWV). The variety has good resistance to white mold with a lower percent of Virginia pods than Florida-07. The variety was developed by the University of Florida. This is a patented variety and may only be propagated by licensed producers. 5/ U. S. Protected Variety to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts – ACI 236

Peanuts – ACI 406

Peanuts – ACI 808

Peanuts – ACI 883

Peanuts – Florida-07

The variety was developed at the North Florida Research and Education Center, part of the University of Florida Institute of Food and Agricultural Sciences. This variety has a runner growth habit with a semi-prominent main stem. Pods are larger than a typical runner and the seed size is most similar to the cultivar C-99R. Florida-07 has excellent resistance to spotted wilt caused by tomato spotted wilt virus and good resistance to white mold and tolerance to late leaf spot. Florida-07 has high oleic, low linoleic oil chemistry. Florida-07 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts - Georgia-04S

Georgia-04S is a high-oleic Spanish-type peanut variety released in 2004. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. It has a similar growth habit and maturity as Georgia Browne. Pod and seed size are similar to other Spanish market type varieties. Georgia-04S has shown a significantly higher yield, TSMK grade, and dollar value return per acre compared to all other leading Spanish varieties. Georgia-04S also has much better TSWV resistance than other Spanish varieties. Georgia-04S is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts – Georgia-06G

This is a runner type peanut released in 2006 by the Georgia Agricultural Experiment Stations. Georgia-06G has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia-06G combines high TSWV resistance with medium maturity, high yield, grade and dollar value return per acre. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

<u>Peanuts – Georgia-09B</u>

Georgia-09B is a new high-oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the Georgia Agricultural Experiment Stations. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, GA. Georgia-09B originated from the first backcross made with Georgia Green, as the recurrent parent. Georgia-09B has the high-oleic and low

linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. During the past several years averaged across multilocation tests in Georgia, Georgia-09B was found to be among the lowest in percent TSWV disease incidence, highest in pod yield, highest in TSMK grade, and highest in dollar value return per acre compared to other high-oleic, runner-types tested each year. Georgia-09B combines the excellent roasted flavor of Georgia Green with the high-oleic trait in a medium maturity, medium-seeded, runner-type peanut variety with high-TSWV resistance, high-grade, and high-dollar value return per acre. Georgia-09B is also covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts - Georgia 11J

Georgia 11J is a high oleic, large podded and large seeded Virginia type peanut cultivar released by the University of Georgia. It has a high level of TSWV and is medium late in maturity. An application for protection under the U.S. Plant Variety Protection Act has been filed and the variety is protected by the high oleic patent. The variety may be propagated by licensed producers only. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts - Georgia-12Y

Georgia-12Y (GA 072531) is a new peanut variety released by the University of Georgia. It has good resistance to TSWV and white mold. The variety is a runner type peanut. An application for protection under the U.S. Plant Variety Protection Act has been filed. The variety may be propagated by licensed producers only. 5/ U.S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts – Georgia-13M

Georgia-13M is a high oleic, small-seeded runner peanut variety released by the University of Georgia in 2013. It has a high level of tolerance to tomato spotted wilt virus (TSWV) and a good overall disease package. An application for protection under the U.S. Plant Variety Protection Act has been filed and the variety is protected by the high oleic patent. The variety may be propagated by licensed producers only. 5/ U.S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts – Georgia-14N

Georgia-14N is a high oleic, root-knot nematode resistant, medium / small-seeded runner peanut variety released by the University of Georgia in 2014. It has a high level of tolerance to tomato spotted wilt virus (TSWV) with medium maturity. An application for protection under the U.S. Plant Variety Protection Act has been filed and the variety is protected by the high oleic patent. The variety may be propagated by licensed producers only. 5/ U.S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts - Georgia Greener

This is a runner type peanut release in 2006 by the Georgia Agricultural Experiment Stations. Georgia Greener has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia Greener has typical runner size pods, low disease incidence, and high TSMK grade. Maturity is ranked as medium similar to Georgia Green. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.

Peanuts - Tifguard

Tifguard is a 135 day maturity runner market type peanut variety developed at the Coastal Plains Experiment Station, Tifton, Georgia. It has high levels of resistance to both the peanut root-knot nematode and TSWV when tested in 2004, 2005 and 2006. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.
