Certified Peanut Buyers Guide

IMPORTANT NOTICE!

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

Georgia Crop Improvement Association, Inc.

Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement.

Please visit www.swvt.uga.edu for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

Certified Peanut Varieties Available in Georgia

(F – Foundation, R – Registered, C – Certified)

107 (FloRun™ ‘107’)

FloRun™ ‘107’ is a medium maturity runner-type variety released by the University of Florida in 2010. The seed size of FloRun™ ‘107’ is similar to Georgia Greener and it produces a high percentage of medium kernels in the grading process. FloRun™ ‘107’ has demonstrated very good yields and grades with good resistance to spotted wilt (TSWV) and moderate resistance to white mold. The maturity of FloRun™ ‘107’ is similar to Georgia Green and requires about 135 days to maturity under irrigated conditions in Florida. The oil of FloRun™ ‘107’ is high oleic and will help fill the need for a medium-sized runner peanut seed with high oleic oil chemistry. **PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, 107, contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

Golden Peanut Company	616	Registered

297 (TUFRunner™ ‘297’)

TUFRunner™ ‘297’ is an extra-large seeded runner-type peanut with high oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. Yield and grade have been excellent. It has a prominent center stem with semi-prostate growth habit. Seed supply will be limited to production of Foundation and Registered seed in 2015. **PVP Level Legend #6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

511
(TUFRunner™ '511')

TUFRunner™ '511' is a large seeded, medium maturity runner-type peanut with high oleic oil chemistry. The University of Florida released TUFRunner™ '511' peanut in July 2013. It has very good resistance to white mold and moderate resistance to TSWV. Yield and grade of TUFRunner™ '511' have been excellent. The seed size is similar to Georgia-06G with a similar out-turn of medium, number one and jumbo kernels. The growth habit of TUFRunner™ '511' is prostrate with a good center stem. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, 511, contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Florida-07

Florida-07 is a medium-late (140± days) runner market-type peanut with runner growth habit. It was released from the University of Florida in 2006. It has shown excellent yield potential (7000+ lbs/acre) with good grades. Seed of Florida-07 is similar in size to C-99R and for this reason, gypsum is recommended. It has good to excellent resistance to TSWV with some white mold resistance, and tolerance to leafspot. Florida-07 has high oleic (80±%) oil chemistry with good to excellent roasting, blanching and processing characteristics. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Florida-07, contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Georgia Greener

Georgia Greener is a high-yielding, TSWV-resistant, typical-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia Greener has a high level of resistance to spotted wilt disease caused by tomato spotted wilt virus (TSWV) and CBR. In multi-location tests conducted in Georgia during the past several years, Georgia Greener was found to have among the lowest disease incidence, highest pod yield, highest TSMK grade, and highest dollar value return per acre compared to other runner-type varieties tested each year. Georgia Greener has darker green foliage, a typical runner seed size, and a medium maturity similar to Georgia Green. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

Jones Peanut Company, Inc.	45	Certified

Georgia-04S

Georgia-04S is a high-yielding, high oleic, Spanish-type variety developed at the UGA Coastal Plain Experiment Station. Intended for the same market, Georgia-04S has shown significantly higher yield, TSMK grade and dollar value return per acre compared to other leading Spanish varieties. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Georgia-04S, contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>

Georgia-06G

Georgia-06G is a high-yielding, TSWV-resistant, large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. In multi-location tests conducted in Georgia during the past several years, Georgia-06G was found to have among the lowest disease incidence, highest pod yield, highest TSMK grade, and highest dollar value return per acre compared to other runner-types tested each year. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade which results in greater dollar value return per acre. ***PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.***

Georgia-09B

Georgia-09B is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07. Georgia-09B combines the excellent roasted flavor of Georgia Green with the high oleic trait for longer shelf-life and improved oil quality of peanut and peanut products. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Georgia-09B contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Georgia-12Y

Georgia-12Y is a new high-yielding, TSWV-resistant, white-mold resistant, medium-seeded, runner-type peanut variety that was released in 2012 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-12Y is similar to another runner-type variety 'Georgia-10T' in having low TSWV disease incidence and total disease incidence. However, during several years averaged over multi-location tests in Georgia, Georgia-12Y had significantly higher pod yield and higher dollar value return per acre compared to Georgia-10T. Georgia-12Y also has a smaller seed size (greater number of seed per pound) than Georgia-10T. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

Georgia-13M

Georgia-13M is a new high-yielding, high oleic, TSWV-resistant, small-seeded, runner-type peanut variety released by the Georgia Agricultural Experiment Station in 2013. It was developed at the University of Georgia, Coastal Plain Experiment Station. During a three-year period, it averaged over multiple location tests in significantly less total disease incidence and greater dollar value return per acre when compared to other high oleic, runner-type varieties. Georgia-13M has a smaller runner seed size. Georgia-13M combines high yield, TSWV resistance with the excellent roasted flavor of Georgia Green and the high oleic trait for longer shelf life and improved oil quality of peanut and peanut products. **PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Georgia-13M, contains the high oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Tifguard

Tifguard was developed by USDA’s Agriculture Research Service in Tifton, Georgia, Tifguard has resistance to nematodes so as to be characterized as “near immunity”, and it offers good yields and grades, especially in places where there would be no yield from other varieties. It offers good resistance to TSWV and maturity is similar to Georgia Green. ***PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.***
