Certified Wheat Buyers Guide

IMPORTANT NOTICE!

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

Georgia Crop Improvement Association, Inc.

Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement.

Please visit www.swvt.uga.edu for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

Certified Wheat Varieties Available in Georgia

(F – Foundation, R – Registered, C – Certified)

8641

(Proprietary)

8641 is an early-medium maturity soft red winter wheat with resistance to Hessian fly Biotype B and E. The variety has resistance to previous years' races of powdery mildew, leaf rust, soil borne mosaic virus and stripe rust. It is recommended for the mid-south, east coast and southeastern US. It is marketed exclusively by Southern States. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Description supplied by the University of Georgia.*

CLASS

FFR Cooperative / Southern States Cooperative

9700

9700 is a soft red winter wheat developed by Syngenta Seeds, Inc. and its legacy companies under the AgriPro Brand. The variety will be marketed in the lower Mississippi valley and the southern east coast. 9700 is resistant to moderately resistant to prevalent field races of stripe rust in the area. It is moderately susceptible to susceptible to prevalent field races of powdery mildew in the east coast areas and moderately resistant in the Delta region. 9700 is resistant to moderately resistant to prevalent field races of leaf rust in the adapted areas. 9700 is susceptible to Hessian fly. 9700 is medium short in height and early season heading. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.** *Description supplied by AOSCA.*

Baldwin
(Proprietary)

Baldwin is a soft red winter wheat developed by Dr. Jerry W. Johnson at the University of Georgia, Georgia Agricultural Experiment Station, Griffin. The variety is a medium maturing, high yielding excellent test weight, awned wheat with resistance to current races of leaf rust, stripe rust, and to Hessian fly biotypes. It is resistant to certain stem and leaf rust lines. Crop Protection Services has an exclusive propagation and distribution license for this variety. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.** *Description supplied by the University of Georgia.*

GA001138-8E36

(Brand AGS 2038)

(Proprietary)

GA001138-8E36 (*Brand AGS 2038*) is a high grain yielding, medium late maturing, good test weight, medium-tall height line with moderate straw strength soft red winter wheat. It was derived from the cross of GA961581 and PIO26R61. Its maturity averages about four days later than AGS 2000 in Georgia. Juvenile plant growth is semi-erect. It is resistant to races of leaf rust and stripe rust in Georgia and southeast and resistant in the field to current biotypes of Hessian fly in Georgia. It is also resistant to wheat soil-borne mosaic virus and has a moderate-resistance to glume blotch. GA001138-8E36 (*Brand AGS 2038*) has a moderate susceptibility to Fusarium head blight (scab). It has good milling and baking quality. **4/ U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Description supplied by the University of Georgia.*

Roberts

Roberts, a soft red winter wheat cultivar was cooperatively developed and released by the Georgia and Florida Agricultural Experiment Stations in 1997. The major advantages of this cultivar are its high grain yield, late maturity and improved disease resistance. This cultivar is adapted throughout the south, especially in the upper Coastal plain and Piedmont regions. It is similar in lodging to GA Gore. Roberts is similar in susceptibility as Coker 9134 to leaf rust. Roberts has shown to have better resistance to Hessian fly than GA Dozier and Coker 9134. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.** *Description provided by the University of Georgia.*
