

2016

Certified Peanut Buyers Guide

IMPORTANT NOTICE!

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to ensure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement Association.

Please visit www.swvt.uga.edu for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

Certified Peanut Varieties Available in Georgia

(F – Foundation, R – Registered, C – Certified)

Variety descriptions provided by:

ACI Seeds, Florida Foundation Seed Producers & University of Georgia

107

(FloRun™ ‘107’)

FloRun™ ‘107’ is a, high-oleic, medium maturing (140± days) runner market-type peanut variety released by the University of Florida in 2010. It has smaller seed size similar to that of Georgia Green and Florunner. FloRun™ ‘107’ has shown excellent yield potential in multi-year trials in Alabama, Florida and Georgia and has had grades (TSMK) superior to that of Florida-07. It has moderate resistance to TSWV and white mold, but is susceptible to late leaf spot. The seed size of FloRun™ ‘107’ makes it attractive and for manufacturers who need a higher percentage of medium kernels for their peanut products. For growers smaller seed reduce seeding costs as compared to the larger seeded varieties like Florida-07 and Georgia-06G.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, 107, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
Banner Grain & Peanut Company	35	Certified
Golden Peanut Company	614.2	Registered

297

(TUFRunner™ ‘297’)

TUFRunner™ ‘297’ is an extra-large seeded runner-type peanut with high-oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. Yield and grade have been excellent. It has a prominent center stem with semi-prostate growth habit. Seed supply will be limited to production of Foundation and Registered seed in 2015.

PVP Level Legend #6: U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. The peanut variety, 297, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

511
(TUFRunner™ '511')

TUFRunner™ '511' is a medium maturity, high-oleic runner-type peanut with excellent yield potential and grade, and very good resistance to white mold. The University of Florida released the peanut variety, 511, in July 2013. It exhibits high yield potential, similar seed size to Florida-07 and Georgia-06G, and better seed grade than Georgia-06G. TUFRunner™ '511' matures in approximately 140 days. In comparison to Florida-07, 511 has consistently, (12 out of 14 comparisons), demonstrated a greater percentage of jumbo runner seeds. During five years of testing in two locations, 511 had, on average, 78.8% TSMK compared to 75.2% in Florida-07. Pod yield for 511 is superior to both Georgia-06G and Florida-07.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, 511, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

ACI 808

ACI 808 is a high-oleic runner peanut variety developed by ACI Seeds of Sumner, Georgia. It has good resistance to TSWV. It produces a large percentage of medium kernels. In South Georgia, ACI 808, matures on average at 135 days.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, ACI 808, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
High Oleics of Georgia	60	Certified

Florida-07

Florida-07 is a medium-late maturity (140± days), large seeded, high-oleic peanut variety. It was released from the University of Florida in 2006. It has outstanding pod-yield potential, competitive grades, high-oleic oil chemistry, and resistance to tomato spotted wilt virus (TSWV) and white mold (southern stem rot). Florida-07 has performed well in Alabama, Florida, Georgia and Texas. The seed size of Florida-07 is larger than that of Georgia Green and similar to Georgia-06G. Florida-07 has a typical runner growth habit with a semi-prominent central stem and dark green foliage.

PVP Level Legend #5: *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Florida-07, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Golden Peanut Company	120	Registered
Golden Peanut Company	322	Certified

Georgia Greener

Georgia Greener is a typical-seeded, runner-type peanut variety with low disease incidence and high TSMK grade, released in 2006 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia Greener has a high level of resistance to spotted wilt disease caused by tomato spotted wilt virus (TSWV). Georgia Greener maturity is ranked as medium similar to Georgia Green.

PVP Level Legend #5: *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
Jones Peanut Company, Inc.	45	Certified

Georgia-04S

Georgia-04S is a high-oleic, Spanish-type variety developed at the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia released in 2004. It has similar growth habit and maturity as Georgia Browne. Pod and seed size are similar to other Spanish market type varieties. Georgia-04S has shown a significantly higher yield, TSMK grade and dollar value return per acre compared to all other leading Spanish varieties. Georgia-04S also has much better TSWV resistance than other Spanish varieties.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Georgia-04S, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.

Georgia Seed Development Commission	15	Foundation

Georgia-06G

Georgia-06G is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

Georgia-06G is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

PVP Level Legend #5: *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

Georgia-09B

Georgia-09B is a high-yielding, high-oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high-oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high-oleic, runner-type variety, Florida-07.

PVP Level Legend #5: *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. The peanut variety, Georgia-09B, contains the high-oleic patented gene and may only be propagated by licensed producers. No farmer saved seed is allowed.*

Georgia-12Y

Georgia-12Y is a high-yielding, TSWV-resistant, white-mold resistant, medium-seeded, runner-type peanut variety released in 2012 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-12Y is similar to another runner-type variety Georgia-10T in having low TSWV disease incidence and total disease incidence. Georgia-12Y also has a smaller seed size (greater number of seed per pound) than Georgia-10T.

PVP Level Legend #5: *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

Tifguard

Tifguard is a 135 day maturity runner market-type peanut variety developed in Tifton, Georgia. It has high levels of resistance to both the peanut root-knot nematode and TSWV when tested in 2004, 2005 and 2006.

PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
