Improvement Association

**2019**

*(2019 Crop & 2020 Sales)*

## **Peanut & Soybean Buyers Guide**

### **IMPORTANT NOTICE!**

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag.

**Georgia Crop Improvement Association, Inc.**

2425 South Milledge Avenue

Athens, Georgia 30605

## Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement.

Please visit [www.swvt.uga.edu](http://www.swvt.uga.edu) for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

# PVP LEVEL (Legend)

**It is very important that you check the description of the variety for the level of protection.**

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

# Certified Peanut Varieties Available in Georgia

(Foundation, Registered & Certified)

Variety descriptions provided by:  
University of Georgia and Florida Foundation Seed Producers

## 297

### *(TUFRunner™ '297')*

TUFRunner™ '297' is an extra-large seeded runner-type peanut with high oleic oil chemistry developed by the University of Florida. Released in 2014, this variety has demonstrated very good resistance to white mold, good resistance to TSWV, but is susceptible to leaf spot. It has a prominent center stem with semi-prostate growth habit.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

## 331

### *(FloRun™ '331')*

FloRun™ '331' is a large seeded, medium maturity runner-type peanut with high oleic oil chemistry. Yield potential is similar to Georgia-12Y. It is moderately resistant to white mold, leaf spot and TSWV. The seed size is similar to Georgia-06G. Growth habit is semi-erect with a prominent main stem at digging. Foliage is light green, and the fruiting habit is alternate.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

## Georgia Greener

This is a runner type peanut released in 2006 by the Georgia Agricultural Experiment Station. Georgia Greener has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia Greener has typical runner size pods, low disease incidence, and high TSMK grade. Maturity is ranked as medium similar to Georgia Green.

***PVP Level Legend #5:*** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## Georgia-06G

Georgia-06G is a large-seeded, runner-type peanut variety that was released in 2006 by the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-06G has a high level of resistance to TSWV. Georgia-06G combines high TSWV resistance with medium maturity and excellent yield and high TSMK grade.

***PVP Level Legend #5:*** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## Georgia-09B

Georgia-09B is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

## Georgia-11J

Georgia-11J is a high oleic, large podded and large seeded Virginia type peanut cultivar released by the University of Georgia. It has a high level of TSWV and is medium late in maturity.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
Georgia Seed Development	21.9	Foundation

## Georgia-12Y

Georgia-12Y is a high-yielding, TSWV-resistant, white-mold resistant, medium-seeded, runner-type peanut variety that was released in 2012 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-12Y is similar to another runner-type variety 'Georgia-10T' in having low TSWV disease incidence and total disease incidence. However, during several years averaged over multi-location tests in Georgia, Georgia-12Y had significantly higher pod yield and higher dollar value return per acre compared to Georgia-10T. Georgia-12Y also has a smaller seed size (greater number of seed per pound) than Georgia-10T.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

## Georgia-14N

Georgia-14N is a high oleic, root-knot nematode resistant, medium/small-seeded runner peanut variety released by the University of Georgia in 2014. It has a high level of tolerance to tomato spotted wilt virus (TSWV) with medium maturity.

**PVP Level Legend #5:** *U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.*

## Georgia-18RU

Georgia-18RU is a normal oleic, high-yielding, TSWV-resistant, leaf scorch / pepper spot resistant, medium-seeded, runner-type peanut variety that was released in 2018 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-18RU has among the lowest TSWV, total disease, and leaf scorch / pepper spot incidence, highest TSMK grade, and smaller seed size as compared to Georgia-06G. The variety will be patented\* and unauthorized propagation (i.e. farmer saved seed) is not permitted.

*\*Patent and PVP applied for.*

## Tifguard

Tifguard was developed by USDA's Agriculture Research Service in Tifton, Georgia, Tifguard has resistance to nematodes so as to be characterized as "near immunity", and it offers good yields and grades, especially in places where there would be no yield from other varieties. It offers good resistance to TSWV and maturity is similar to Georgia Green.

***PVP Level Legend #5: U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.***

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>

## TifNV-High O/L

TifNV-High O/L is a high oleic peanut variety jointly developed by USDA-Agricultural Research Service and the University of Georgia. TifNV-High O/L resulted from a cross between Tifguard and Florida-07. The variety offers high yields, excellent resistance to TSWV and the peanut root-knot nematode along with the high concentration of oleic fatty acid. TifNV-High O/L is a large seeded runner (similar to Tifguard) with medium maturity.

**PVP Level Legend #6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not.

# Certified Soybean Varieties Available in Georgia

(Foundation, Registered & Certified)

## Cook

Cook is a maturity group VIII. It is resistant to major races of frogeye leaf spot and has moderate resistance to southern root-knot nematode. It is resistant to stem canker and powdery mildew. It is susceptible to the peanut and Javanese root-knot nematode and the soybean cyst nematode.

**PVP Level Legend #0:** Variety not protected by PVPA – No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>

## G00-3209

**(Brand AGS Woodruff)  
(Proprietary)**

G00-3209 (Brand AGS Woodruff) is a non-Roundup Ready, Maturity Group VII soybean. It is resistant to SRKN, SCN(R#), stem canker and red crown rot. It is susceptible to peanut root-knot nematode and most other races of soybean cyst nematode. The variety will be marketed exclusively by AGSouth Genetics, LLC and is a patented variety. No farmer saved seed is allowed.

Georgia Seed Development		

## G06-3182RR

**(Brand AGS 738RR)  
(Proprietary)**

G06-3182RR is an early Maturity Group VII, glyphosate-resistant variety. It is similar in maturity to AGS 758RR and several days earlier than USG 7732nRR. It has purple flowers, tawny pubescence, and tan pod walls. The seeds of G06-3182RR are yellow with shiny seed coats and black hila. G06-3182RR is resistant to southern and Javanese root-knot nematodes and soybean cyst nematode (R3). It is also resistant to southern stem canker. The variety is patented and unauthorized propagation (i.e. farmer saved seed) is not permitted.

*\*Source: United States Plant Patent; Patent # US 9,426,955 issued on August 30, 2016.*

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
Georgia Seed Development Plantation Seed Conditioners, Inc.		

**G13LL-44**  
**(Brand SH 7418LL)**  
**(Proprietary)**

G13LL-44 is a Maturity Group VII, glufosinate-tolerant variety with white flowers, tawny pubescence, and tan pod walls. It averages three days earlier than AGS 828RR and four days later than AGS 738RR. It has yellow seeds with dull seed coats and black hila. G13LL-44 possesses resistance to soybean cyst nematode (R3), and frogeye leaf spot and moderate resistance to southern root-knot nematode.

**PVP Level Legend #7:** U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

## UA 5715GT

UA 5715GT is a RR, late maturity group V (relative maturity 5.7) soybean variety developed by the Arkansas Agricultural Experiment Station. UA 5715GT has an advantage of 2.0 bu/ac over UA 5414RR released in 2014. It has white flowers, gray pubescence and tan walls. Plants of UA 5715GT are 32" tall, on average, with high resistance to lodging and shattering. It is resistant to stem canker, frogeye leaf spot and moderately resistant to reniform nematodes. It is susceptible to southern root-knot nematode, soybean cyst nematode (races 1, 2, 3 and 5) and moderately susceptible to sudden death syndrome. The variety is patented and unauthorized propagation (i.e. farmer saved seed) is not permitted.
