**IMPORTANT NOTICE!**

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. This publication has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag.

## Consumer Notices

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill 104 in 1956. This bill was superseded by Senate Bill 583 in July of 1997 and Senate Bill 390 in 2012. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting **GEORGIA CERTIFIED SEED** are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to the Georgia Crop Improvement.

Please visit [www.swvt.uga.edu](http://www.swvt.uga.edu) for the most recent variety performance data (yields, maturity dates, disease resistance and insect resistance) or contact the Department of Crop and Soil Sciences, Griffin Campus for a copy of *The Statewide Variety Tests*.

# PVP LEVEL (Legend)

**It is very important that you check the description of the variety for the level of protection.**

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

# Certified Peanut Varieties Available in Georgia

*(Foundation, Registered & Certified)*

Variety descriptions provided by:  
University of Georgia and Florida Foundation Seed Producers

## 331

### *(FloRun™ '331')*

FloRun™ '331' is a large seeded, medium maturity runner-type peanut with high oleic oil chemistry. Yield potential is similar to Georgia-12Y. It is moderately resistant to white mold, leaf spot and TSWV. The seed size is similar to Georgia-06G. Growth habit is semi-erect with a prominent main stem at digging. Foliage is light green, and the fruiting habit is alternate.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## 52N

### *(FloRun™ '52N')*

FloRun™ '52N', the first normal oleic cultivar out of the UF breeding program in over 10 years, released in January 2023. FloRun™ '52N' was tested over a five-year period for its yield and grade potential and was found to have excellent pod yield potential and high grades. FloRun™ '52N' was found to have approximately 4.5% higher yield than 'Georgia-06G' with equal grade of about 77% total sound mature kernels (TSMK). It also has moderate TSWV resistance and better resistance to white mold disease than 'Georgia-06G'. FloRun™ '52N' was developed by Dr. Barry Tillman at the UF/IFAS North Florida Research and Education Center. U.S. PVP Pending.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

**Arnie**

Developed by Dr. Barry L. Tillman, "Arnie" is a semi-erect profuse runner-type peanut variety with a medium green color. It has an alternate fruiting pattern with no flowering on the mainstem. When under the proper cultural practices, it will produce 2-3 seeds per pod with a tan seed coat color. It is medium in maturity, which is about 140 days in the southeast region, and has TSWV resistance. This variety has normal oleic chemistry, making it the second release from the University of Florida-IFAS in recent years with this trait.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

## Georgia-09B

Georgia-09B is a high-yielding, high oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the University of Georgia Coastal Plain Experiment Station in Tifton, Georgia. Georgia-09B has a high level of resistance to spotted wilt disease caused by TSWV. Georgia-09B also has the high oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. Georgia-09B originated from the first backcross made with Georgia Green as the recurrent parent. It has an intermediate runner growth habit and medium maturity, similar to Georgia Green. Georgia-09B has a medium runner seed size as compared to the larger-seeded, high oleic, runner-type variety, Florida-07.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## Georgia-12Y

Georgia-12Y is a high-yielding, TSWV-resistant, white-mold resistant, medium-seeded, runner-type peanut variety that was released in 2012 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-12Y is similar to another runner-type variety 'Georgia-10T' in having low TSWV disease incidence and total disease incidence. However, during several years averaged over multi-location tests in Georgia, Georgia-12Y had significantly higher pod yield and higher dollar value return per acre compared to Georgia-10T. Georgia-12Y also has a smaller seed size (greater number of seed per pound) than Georgia-10T.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## Georgia-18RU

Georgia-18RU is a normal oleic, high-yielding, TSWV-resistant, leaf scorch / pepper spot resistant, medium-seeded, runner-type peanut variety that was released in 2018 by the Georgia Agricultural Experiment Station. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-18RU has among the lowest TSWV, total disease, and leaf scorch / pepper spot incidence, highest TSMK grade, and smaller seed size as compared to Georgia-06G. The variety is patented\* and unauthorized propagation (i.e. farmer saved seed) is not permitted).

*\*Source: United States Plant Patent; Patent # US 16,713,720 issued on June 17, 2021.*

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. ## Georgia-20VHO

Georgia-20VHO is a high-yielding, TSMK grading, very high-O/L ratio, TSWV-resistant, runner-type peanut variety released in 2020 by the University of Georgia. Georgia-20VHO has a significantly higher oleic to linoleic fatty acid ratio compared to other high-oleic runner-type peanut varieties. Georgia-20VHO had significantly higher percentage of total sound mature kernels (TSMK) grade compared to several other high-oleic runner varieties in Georgia. It also has excellent TSWV resistance as compared to other high-oleic varieties.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

## Georgia-21GR

Georgia-21GR is a new normal (mid)-oleic, runner-type peanut cultivar. It has a flat-runner growth habit and medium to medium+ maturity (Fig. 1). It also has a high level of resistance to tomato spotted wilt virus (TSWV), and it is not highly susceptible to leafspot (Fig. 2). Georgia-21GR was found to have among the lowest TSWV and total disease incidence and among the highest in yield and dollar value when compared to many other normal and high-oleic runner-type peanut cultivars. Also, it was again significantly higher in TSMK grade percentage compared to many of these other cultivars. U.S. Utility Patent and Plant Variety Protection (PVP) applied for.

**PVP Level Legend #7:** U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

## Georgia-22MPR

Georgia-22MPR is a new high-oleic, multiple pest resistant (MPR), runner-type peanut cultivar. It has a flat decumbent runner growth habit and medium late maturity. It also has a high level of resistance to tomato spotted wilt virus (TSWV), root-knot nematode (RKN) and leafhopper insect. Georgia-22MPR was found to have a higher protein content but lower oil content than the TifNV-High O/L cultivar. However, it was found to also have similarly high O/L ratio and peanutty flavor score as TifNV-High O/L and Georgia-14N. U.S. Utility Patent and Plant Variety Protection (PVP) applied for.

**PVP Level Legend #7:** U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

## Georgia-23RKN

Georgia-23RKN is a new high-yielding, normal-oleic, TSWV-resistant and root-knot nematode (RKN)-resistant, runner-type peanut variety that was released in 2023 by the Georgia Agricultural Experiment Stations. It was developed by Dr. William D. Branch and Dr. Timothy B. Brenneman at the University of Georgia, Coastal Plain Experiment Station in Tifton, GA. Georgia-23RKN has significantly less TSWV and total disease incidence compared to the Tifguard and TifNV-High O/L varieties in Georgia. It also has very high-level of RKN resistance similar to Georgia-14N. However, Georgia-23RKN has a normal-oleic fatty acid O/L ratio similar to Tifguard. Georgia-23RKN combines high yield and dollar values with high TSWV-resistance and RKN-resistance in a normal-oleic, medium-large seeded, runner-type peanut variety.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

<u>NAME</u>	<u>ACRES</u>	<u>CLASS</u>
Georgia Seed Development	6.00	Foundation

## IPG 913

Developed by International Peanut Group, IPG 913 is a normal-oleic, runner-type peanut cultivar with a prostrate growth habit and competitive yield and grade potential for the U.S. Southeast. IPG 913 is most similar to Georgia-06G in plant shape and size and overall growth habit. However, IPG 913 has slightly larger leaflets than Georgia-06G, as well as a longer lateral branch length. IPG 913 is most like ACI 149 in canopy color; it is also similar to AU-NPL 17 and Georgia-12Y. Pod and seed size of IPG 913 is relatively large, similar to AU-NPL 17 and Georgia-06G. IPG 913 is also a medium-maturity cultivar, reaching harvest maturity in the U.S. Southeast in approximately 140 days after planting; this is similar to the maturity profile of AU-NPL 17 and Georgia-06G.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

**Tif-CB7**

Tif-CB7 is a new high-yielding, high-grading, variety that was released by the USDA-ARS and the Georgia Agricultural Experiment Station in 2023. Tif-CB7 is a high oleic acid, runner market-type cultivar that also has high resistance to late leaf spot and TSWV. It is a medium maturity class peanut, with about 140 days needed for optimal maturity. Tif-CB7 has an extremely high level of resistance to late leaf spot which should greatly reduce the need for fungicide sprays. When evaluated under full fungicide spray regimes, Tif-CB7 yielded at least equivalent to other common peanut cultivars. Tif-CB7 had higher yields than common cultivars when tested with no fungicide control for leaf spot. Growing Tif-CB7 with reduced fungicide sprays can be used to maximize on farm profitability.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

## TifJumbo

TifJumbo is a Virginia-type peanut variety release by the USDAARS and the University of Georgia. Marker assisted selection was used to select for nematode resistance and the high-oleic to linoleic (O/L) characteristic. TifJumbo has a high level of resistance to both the peanut root-knot nematode and TSWV and has a high ratio of oleic acid to linoleic acid. When tested in fields without nematode pressure TifJumbo exhibited yields that were at least like other currently grown peanut varieties. When tested in field with nematode pressure, TifJumbo exhibited significantly higher yields in comparison to other Virginia-type peanut varieties.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

## TifNV-HG

TifNV-HG is a high oleic acid peanut jointly developed by USDA-Agricultural Research Service and the University of Georgia. TifNV-HG is runner market-type in seed and pod size. It has a spreading runner growth habit with an erect mainstem that is prominent throughout the growing season, and at harvest. It has a high level of resistance to the peanut root-knot nematode [Meloidogyne arenaria (Neal) Chitwood race 1]. It is a medium maturity class peanut, with about 135 days needed for optimal maturity. TifNV-HG has a light pink testa (seed coat) with percent kernels comparable to other runner cultivars.

**PVP Level Legend # 6:** U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.

### TifNV-HG (continued)

TifNV-HG is a high oleic acid peanut jointly developed by USDA-Agricultural Research Service and the University of Georgia. TifNV-HG is runner market-type in seed and pod size. It has a spreading runner growth habit with an erect mainstem that is prominent throughout the growing season, and at harvest. It has a high level of resistance to the peanut root-knot nematode [*Meloidogyne arenaria* (Neal) Chitwood race 1]. It is a medium maturity class peanut, with about 135 days needed for optimal maturity. TifNV-HG has a light pink testa (seed coat) with percent kernels comparable to other runner cultivars.

### TifNV-High O/L

TifNV-High O/L is a high oleic peanut variety jointly developed by USDA-Agricultural Research Service and the University of Georgia. TifNV-High O/L resulted from a cross between Tifguard and Florida-07. The variety offers high yields, excellent resistance to TSWV and the peanut root-knot nematode along with the high concentration of oleic fatty acid. TifNV-High O/L is a large seeded runner (similar to Tifguard) with medium maturity.

**PVP Level Legend #5:** U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.

# Certified Soybean Varieties Available in Georgia

(Foundation, Registered & Certified)  
(Quality Assurance)

## G00-3209

(Brand AGS Woodruff)  
(Proprietary)

G00-3209 (Brand AGS Woodruff) is a non-Roundup Ready, Maturity Group VII soybean. It is resistant to SRKN, SCN(R#), stem canker and red crown rot. It is susceptible to peanut root-knot nematode and most other races of soybean cyst nematode. The variety will be marketed exclusively by AGSouth Genetics, LLC and is a patented variety. No farmer saved seed is allowed.

**PVP Level Legend #0:** Variety not protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.

## G06-3182RR

(Brand AGS 738RR)  
(Proprietary)

G06-3182RR is an early Maturity Group VII, glyphosate-resistant variety. It is similar in maturity to AGS 758RR and several days earlier than USG 7732nRR. It has purple flowers, tawny pubescence, and tan pod walls. The seeds of G06-3182RR are yellow with shiny seed coats and black hila. G06-3182RR is resistant to southern and Javanese root-knot nematodes and soybean cyst nematode (R3). It is also resistant to southern stem canker. The variety is patented and unauthorized propagation (i.e. farmer saved seed) is not permitted.

\*Source: United States Plant Patent; Patent # US 9,426,955 issued on August 30, 2016.

**PVP Level Legend #0:** Variety not protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
